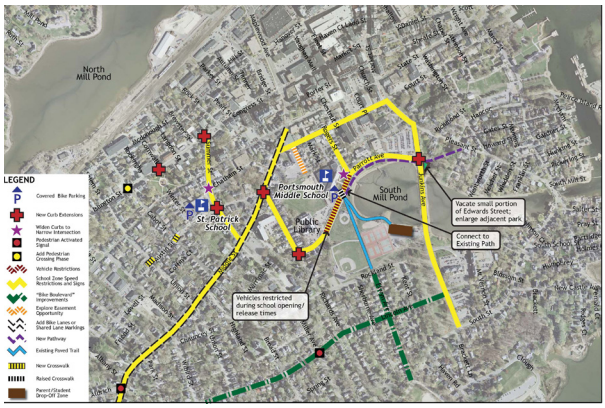
Safe Routes to School

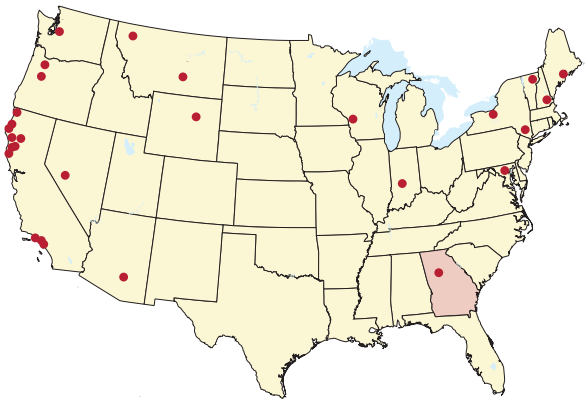
As parents and as leaders in the nation's growing awareness of the benefits of walking and bicycling, Alta Planning + Design is proud to be at the forefront of the Safe Routes to School (SR2S) movement.

Alta's Safe Routes to School services offer a uniquely complete package. In addition to outstanding infrastructure improvements, we have a specially trained team available for "the other 4 E's": Education, Encouragement, Enforcement, and Evaluation. From implementing in-school pedestrian and bicycle education programs to reaching thousands of families through International Walk to School Day events, our work creates community excitement around active, healthy youth transportation.



All of the schools in the Portsmouth, New Hampshire SR2S program are located in different contexts and required unique solutions to overcome infrastructure-related barriers and to promote interest in walking and biking.

Alta Planning + Design Safe Routes to School Planning & Project Locations



This pedestrian refuge island was added in Bozeman, Montana after deficiencies were found during a walking audit.

Alta has managed the City of Portland, Oregon's Safer Routes to School program since 2004.
