

Trailhead Planning & Design

Trailheads are the gateway points for successful trails. At a trailhead, we draw together informational signage, parking, restrooms, and interpretive information.

Alta Planning + Design provides complete trailhead planning and design services, including design, alternatives analysis, environmental documentation, property acquisition strategies, accurate cost estimation, maintenance and management plans, and funding strategies. We integrate green design solutions such as permeable pavement, bioswale stormwater drainage, native plant restoration, viewpoint location, and community connectivity.

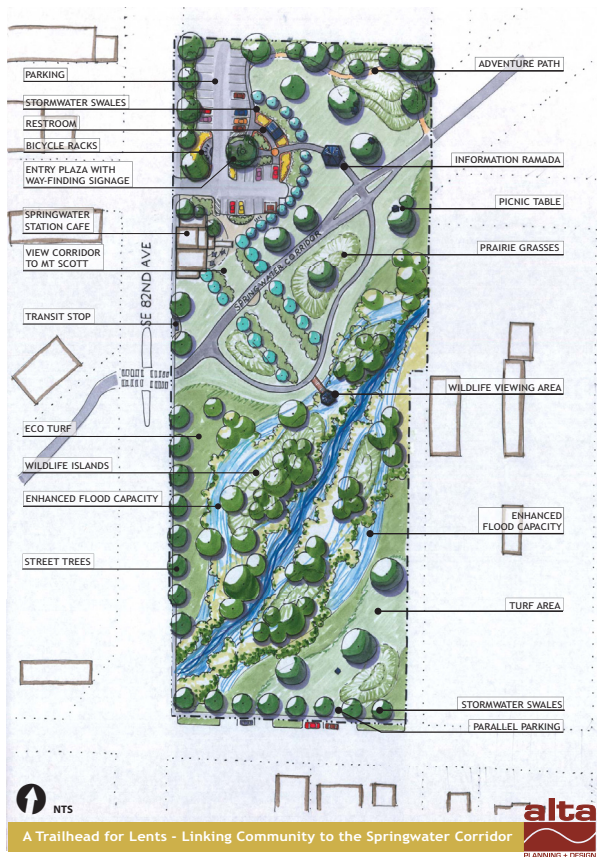

Our dozens of trailheads are functional and beloved places for gathering, celebration, and connection.

Alta designed this trailhead for the Amargosa Creek Trailhead and Pathway in Lancaster, California. It includes custom furniture, signage, a parking lot, and a restroom.

Linneman Station, designed as part of Alta's Phase V improvements to the Springwater Corridor in Oregon, includes this trailhead, which features equestrian trailer parking and a museum designed to capture the essence of the historic Linneman Station building.

The Lents Trailhead, along Portland, Oregon's 16-mile Springwater Corridor, celebrates the beloved Johnson Creek.
