

There is nothing more important in our minds than integrating bicycling and walking into kids' daily activities. Bicycling and walking to school is at an all-time low nationwide while diabetes and obesity are increasingly a national crisis. As parents and as leaders in the nation's growing awareness of the benefits of walking and bicycling, we are proud to be at the forefront of the Safe Routes to School (SR2S) movement. We provide a variety of SR2S technical assistance, ranging from setting up programs to conducting school walking audits and training workshops to grant writing assistance for SR2S projects and programs. We have two certified National SR2S Instructors on our staff. Alta has developed SR2S programs for local elected officials, traffic engineers, city planners, health officials, and school officials.

Our toolbox of solutions includes: signal timing modifications, curb extensions and median islands, traffic calming, markings and signage, bicycle lanes, crosswalks, educational safety curriculums, and outreach programs to encourage safe driving.

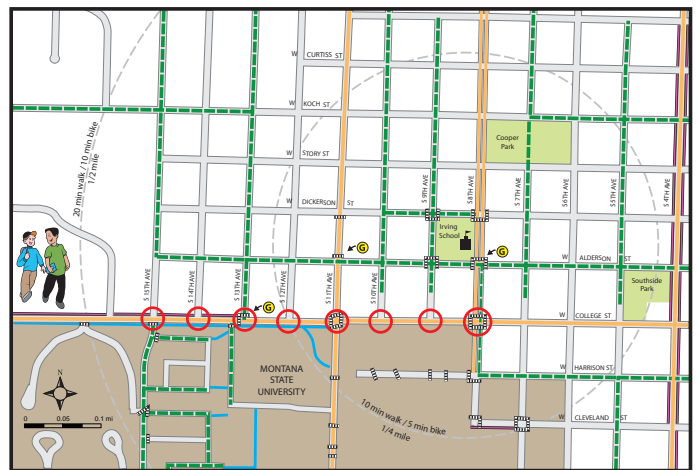

Alta helps get families back on the path of independent, healthy, safe transportation to school.
